

Trinisys eTeller

Trinisys eTeller is a fully integrated, fully featured teller platform that streamlines all your tellers' job functions.

YOUR FIRST LINE

Tellers are the first point of contact for the majority of your customers. Therefore, the software that they use the most should increase their ability to serve your customers in a quick and pleasant manner.

COMPLIANCE

Advanced CTR and SAR reporting, across all branches and any dates allows you to stay compliant automatically, eliminating manual processes or non-compliance due to human error.

SAVE TIME

eTeller was designed with speed in mind. eTeller is intuitive and allows tellers to work primarily on the keyboard. Teller systems that make you move back and forth between the keyboard and mouse waste time and motion.

eTeller has an optional interface with the Diebold Teller Cash Automation Solution to completely automate teller cash.

The Diebold solution helps ensure cash drawers are in balance, speeds up teller traffic, eliminates human error, and allows your tellers to spend their time interacting with customers, not counting cash.

eTeller also gives you the ability to redeem savings bonds and keep track of annual totals for automated IRS reporting, eliminating manual spreadsheet or paper logs.

SAVE MONEY

Real time integration with Trinisys means all items processed at the teller line are immediately marked up, reducing the possibility of fraudulent activity. This integration with Trinisys helps prevent losses from cashing stops or holds, alerting your tellers to these conditions
